SUMMARY

Computer Science undergraduate specializing in backend development and problem solving. Solved 300+ data structures and algorithms problems and built full-stack applications involving authentication, role-based access, and real-time workflows. Focused on writing efficient code, debugging complex logic, and designing scalable web systems.

EDUCATION

2024 – Present	B.Tech in Computer Science & Engineering GITAM University, Visakhapatnam	CGPA: 8.7/10
2022 – 2024	Intermediate (MPC) Pandiit Junior College, Visakhapatnam	91%

TECHNICAL SKILLS

Languages	C, Python, JavaScript, SQL
Core CS	Data Structures, Algorithms, OOP, Time Complexity Analysis, Recursion, Hashing
Web Development	HTML, CSS, DOM Manipulation, Spring Boot, REST APIs, Authentication, Role-based Access Control
Databases	MySQL, Relational Database Design, Query Optimization
Tools	Git, GitHub, VS Code, Linux Basics

EXPERIENCE

Koutuhal.ai — Full Stack Developer + Automations Engineer May 2026 – Present

- Working on the AI Tutor internship platform, contributing to both frontend and backend development
- Building scalable full-stack features involving authentication, APIs, dashboards, and workflow automation
- Developing automations to streamline internal operations, data handling, and productivity workflows
- Collaborating on deployment, debugging, and optimization of production-grade web systems

PROJECTS

AgentAstra — Multi-Agent AI Startup War Room [Live Link](#)

- Built a real-time startup intelligence platform using FastAPI backend and Next.js + Tailwind CSS frontend
- Designed an asynchronous multi-agent pipeline with asyncio + ThreadPoolExecutor to parallelize specialist LLM agents for market sizing, competitor scouting, pain-point discovery, timing, and red-team risk analysis
- Implemented Server-Sent Events (SSE) to stream live agent progress and results into the dashboard
- Developed dynamic multi-model routing across OpenAI, Anthropic, and Groq providers for role-specific research, analysis, critique, and simulation
- Built a bull/bear/realist debate engine plus an interactive Shark Tank investor simulator for actionable startup recommendations
- Added “what-if” scenario rerun APIs to re-evaluate specific agents under alternate assumptions and preserve cached analysis results

AI Tutor — Interactive AI Learning Platform

[Github-Url](#)

- Built browser-based AI-powered learning platform with real-time coding and doubt-solving capabilities
- Implemented Retrieval-Augmented Generation (RAG) pipeline for context-aware doubt solving using document retrieval and AI-generated responses
- Developed MCQ evaluation, automated student progress tracking, and intelligent learning workflows
- Designed modular full-stack architecture supporting scalable educational content delivery
- Integrated automation pipelines and backend APIs for efficient user and learning management

URL Shortener — Scalable Link Management System

[Github-Url](#)

- Built a production-ready URL shortening service using Spring Boot, REST APIs, and MySQL
- Implemented short link generation, automatic redirects, and expiration-based link invalidation
- Designed relational database schema using JPA/Hibernate for efficient link storage and retrieval
- Developed metadata API endpoint to inspect link details including creation date and expiration status
- Containerized the application using Docker and deployed on Render with a managed MySQL database

ACHIEVEMENTS

- Solved 300+ problems on LeetCode covering arrays, hashing, recursion, trees, and dynamic programming [Leetcode Profile](#)
- Won **1st Place** in IdeaSprint 3.0 Hackathon conducted by TMGC Group, GITAM University among 80+ participating teams
- Won **3rd Place** in Shark Tank 2.0 conducted by E-Club GITAM for pitching **Sanchari**, an interactive AI-powered coding learning platform
- Selected for Smart India Hackathon internal round
- Deployed multiple full-stack web applications accessible online
